# E Stop and Tongue Switches with OSSD Outputs Operating Instructions 

## READ AND UNDERSTAND THESE INSTRUCTIONS BEFORE INSTALLING, OPERATING, OR MAINTAINING THIS EQUIPMENT.

The product is designed to be a component of a customized safety oriented control system. It is the responsibility of each manufacturer to ensure the correct overall functionality of its systems and machines. IDEM, its subsidiaries and affiliates, are not in a position to guarantee all of the characteristics of a given system or product not designed by IDEM.

## APPLICATION:

The switch OSSD outputs replace traditional electro-mechanical contact blocks to provide solid state outputs and internal self-checking.

The devices are able to maintain PLe with devices connected in series due to internal self-tests.
These devices can be connected in series with other 'Z' type devices (LPZ, LMZ, BMZ, BPZ, KLM-Z, KLP-Z, KL3-SS-Z, and HS-Z) to form a system. It is recommended to limit the number of switches connected in series to 30 maximum.

ALWAYS READ THESE INSTRUCTIONS IN CONJUNCTION WITH ANY OTHER INSTRUCTIONS PROVIDED WITH THE SWITCH DEVICES.

All supplied fitted with 8 pin M12 Male Connector on 250 mm ( 10 inch) flying lead

## OPERATION:

The products are designed to conform to EN60947-5-3 and be used as directed by ISO14119 and EN ISO12100.

## IMPORTANT:

The safety functions and mechanics must be tested regularly. For applications were infrequent use is foreseeable, the system must have a manual function test to detect a possible accumulation of faults. At least once per month for PLe Cat3/4 or once per year for PLd Cat3 (ISO13849-1). Where possible it is recommended that the control system of the machine demands and monitors these tests, and stops or prevents the machine from starting if the test is not done. (See ISO14119).

## INSTALLATION:

Installation of all safety devices must be in accordance with a risk assessment for the individual application.
The use of a Safety Relay or Safety Controller is required for monitoring Z-Range devices.
The Safety Relay or Safety Controller will monitor 2 redundant circuits as per ISO13849-1 for up to PLe / Category 4 protection.
If excessive vibration is present, consider additional fitting of anti-vibration washers.
After installation always check each switch function by opening and closing each guard individually in turn and ensuring that the appropriate LEDs on the Safety Relay or Controller are illuminated when the switch is closed and are extinguished when the switch is open. Check that the machine stops and cannot be re-started when each switch is operated.

## SCHEMATIC:

## MAINTENANCE:

Monthly: Look for signs of mechanical damage to the switch casing. Check wiring for signs of damage. Check individual device function by operating each device to the on and off positions in turn and ensuring that the appropriate LED's on the Safety Relay or Controller are illuminated when the device is in the on position and are extinguished when the device is in the off position. Check that the machine stops and cannot be re-started when each device is in the off position. Never repair any device, actuator or integral cables. Replace any device displaying signs of mechanical damage to the casing or cables.
These requirements form part of the product warranty.

AVERTISSMENT:
NE PAS DESACTIVER, MODIFIER, RETIRER, OU CONTOURNER CETI INTERVERROUILLAGE IL PEUT EN RESULTER DES BLESSURES GRAVES DU PERSONNEL UTLLISATEUR.
